Cervical Cerclage - Cleveland Clinic

What is cervical cerclage? Cervical cerclage is a medical procedure in which your doctor places a single stitch around your cervix, the opening to your uterus. The stitch sews your cervix closed. Doctors perform cerclage to prevent late (second trimester) miscarriages and preterm (early) delivery. Women may be at risk for these complications.

Recurrence miscarriage is two or more consecutive pregnancy losses. In contrast, infertility is the inability to conceive. In many cases the cause of RPL is unknown. After three or more losses, a thorough evaluation is recommended by American Society of Reproductive Medicine. About 1% of couples trying to have children are affected by recurrent miscarriage.
